Private biometric access

Onboarding

Onboarding is carried out remotely in less than a minute. The user only needs to take a selfie (+ an optional ID photo for extra security). This data is encrypted into a biometric and private QR code that the user will receive to access the facilities. **Users are the owners of their data at all times.**

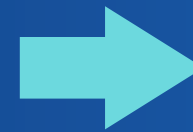

Face Biometrics & Liveness Detection

Document verification (optional)

Biometric and private QR code generation

Access

Users access by scanning their private QR code in the terminal which compares the information with the new selfie that it takes at the moment of access.

Face + private QR access

Transparent Access

Onboarding

Onboarding is carried out remotely in less than a minute. The user only needs to take a selfie (+ an optional ID photo for extra security). **Data is stored in the client's database for registered users.**

Face Biometrics & Liveness Detection

Document verification (optional)

Access

Users access by just showing their face, being recognized by the terminal among the database for irreversible vectors for registered users.
